

ABSTRACT

Problems

The present invention provides an ink composition which,
 5 when applied as an ink-jet recording solution to plain paper and
 processed glossy paper, assumes vivid yellow color and gives
 printed material excellent in light fastness, gas fastness and
 moisture fastness.

Means for solving the problems

10 Ink-jet printing with an ink-jet ink composition containing
 a disazo compound represented by the following formula (1) can
 give a vivid yellow-colored product excellent in light fastness,
 gas fastness and moisture fastness

15 (in the formula (1), X represents specific diamine residue;
 and Y₁ and Y₂ each represent an alkylamino group substituted with
 a sulfonic acid group and/or a carboxyl group, a phenoxy group
 substituted with a sulfonic acid group and/or a carboxyl group
 and an anilino group substituted with a sulfonic acid group and/or
 20 a carboxyl group).
